

---

**Algorithm 1** Algoritmo esercizio 3

---

**Require:** *array*  $A$ , *ordinato*

Sia  $A[1:n]$  un vettore di  $n$  caratteri

$num_y \leftarrow \text{appbinsearch}(A, "Y", 0)$

$num_e \leftarrow \text{appbinsearch}(A, "E", 1) - num_y$

$num_s \leftarrow \text{appbinsearch}(A, "S", 2) - (num_y + num_e)$

---

---

**Algorithm 2** Applicazione binary search

---

**Require:** *array*  $A$ , *carattere*  $k$ , *flag*

$lx \leftarrow 0$

$rx \leftarrow \text{arraysize}[A] - 1$   $\triangleright \text{arraysize}[A] = n(\text{lunghezza del vettore})$

**while**  $lx \leq rx$  **do**

$c = \lfloor \frac{lx+rx}{2} \rfloor$

**if**  $k = A[cx] \wedge (cx = n - 1 \vee A[cx - 1] \neq k)$  **then return**  $cx+1$

**end if**

**if**  $flag = 0 \vee flag = 1$  **then**  $\triangleright flag = 0, 1$  carattere Y o E

**if**  $k \neq A[cx + 1]$  **then**

decremento  $rx$

**else**

incremento  $lx$

**end if**

**else**

**if**  $k \neq A[cx - 1]$  **then**

incremento  $lx$

**else**

decremento  $rx$

**end if**

**end if**

**end while**

se non trovo niente **return** -1
